

Figure 10 is a line plot showing the difference in the number of nodes between the ground truth and the estimated network for each year from 2004 to 2019. The x-axis is labeled 'Difference [%]' and ranges from -40 to 40. The y-axis represents the years. Each year is represented by a colored line. Most years show a significant negative difference (underestimation) between -20% and -40%, with a sharp drop to -40% around 2008-2010. The 2017 line is notably different, showing a positive difference around 10%.
